

WEB PAGES with HTML

LESSON 14: Web Page - Making Your List

In this lesson you will:

- Copy text from Internet
- Create definition listings
- Create an ordered and unordered list

Directions:

- Using Notepad, insert all your basic tags. Insert the following between the title tags: *My Page of List Types*
- Using heading 1 tags, type in the following title: *Student's Name List Page*. This title should be centered.
- Add a horizontal rule; width and size your choice.
- Using heading 3 tags, type in the following line: *Macromedia Software*.
- Now you are going to make a definition list. A definition list is a list of terms and corresponding definitions. You begin a definition list with a <DL> tag and then the next line states the term and definition and will look like this:
<DT>Term<DD>Definition
The three <DT> terms are *Dreamweaver MX 2004*, *Fireworks MX 2004* and *Flash MX 2004*. Type these in and then click onto the link to go to the Macromedia site.
<http://www.macromedia.com/software/>
Copy the description for each of the three types of software and put the descriptions after the <DD> tags.
- Close the definition list with a </DL> tag.
- The next list is going to be an unordered list. Use heading 3 tags and insert the following: *My Favorite 3 Movies*. This unordered list needs to include titles to at least three of your favorite movies.
- The next list is going to be an ordered list. Use heading 3 tags and insert the following: *My Favorite 3 Snacks*. This ordered list needs to include names of at least three of your favorite snacks.
- The following changes need to take place in the body of the file. Change the title to be a color of your choosing. Make each section of text (Macromedia, Movies, Snacks) a new color.
- Add a horizontal line between the definition list and the movie list and also between the movie list and the snack list. The attributes of the horizontal lines are of your choice.
- Save the file as **lists.htm**. View the browser page. Print and staple the browser page on top of the HTML code page.
